Loops and Arrays Practice Assignment

Create a class named **Person**

- Every Person has a **FirstName** which is a string.
- Every Person has a **LastName** which is a string.
- Every Person is created with initial values for their **FirstName** and **LastName**.
- Every Person can **Print** their full name to the console.

In the Main Program:

- Declare and instantiate at least 3 people with distinct names.
- Store all three people inside of a single array.
- Loop through the array and print each person's full name.
